

SHARK S3

Advanced Musical Compressor

Detailed control. A clear view of your dynamics.

Bring vocals, instruments and buses into focus with a compressor designed around visible feedback and direct control. Follow layered input/output history and a distinct red gain-reduction display while you listen.

Find the response

Choose Clean, Vocal, Bus, Master, Punch or Upward. Shape threshold, ratio, attack, release, knee and range, then explore ARC, Electro/Opto behavior and Smooth/Warm tone.

Refine the trigger

Switch between Peak and RMS detection. Filter the internal or external sidechain with HP, LP and a parametric bell. Use Listen to hear the detector signal.

Go deeper

Open Advanced for Hold, tempo-related release, input and wet gain, Mid/Side channel focus, and three character modes with Pre/Post gain-reduction routing.

Keep the session moving

Browse 100 factory presets, mark favorites and compare A/B/C settings. Choose orange, purple, blue or green. Resize the compact interface or expand the view.

Shark Plugs - SHARK S3
